Re: Generic Docket to Establish Generally Available Terms and Conditions

for Interconnection
Docket No. 01-00526

Dear Mr. Waddell:

Pursuant to the Authority's January 11, 2002 Notice of Filing, on January 25, 2002, BellSouth filed its modified interconnection agreement with amendments, including revised rate sheets, in red-lined format. We have just been advised that page 18 of Attachment 2 of the agreement was not included in some copies of the filing. A copier processing error also apparently caused page 17 of Attachment 2 to copy only part of the page. Enclosed are fourteen copies of pages 17 and 18 of Attachment 2. Copies of the enclosed are also being provided to counsel of record. We apologize for any inconvenience this may have caused.

GMH:ch

Unbundled Copper Sub-Loop
Unbundled Sub-Loop Distribution – Intrabuilding Network Cable (aka riser cable)

- 2.8.2.2 Unbundled Sub-Loop Distribution Voice Grade (USLD-VG) is a sub-loop facility from the cross-box in the field up to and including the point of demarcation, at the end user's premises and may have load coils.
- Unbundled Copper Sub-Loop (UCSL) is a copper facility of any length provided from the cross-box in the field up to and including the end-user's point of demarcation. If available, this facility will not have any intervening equipment such as load coils between the end-user and the cross-box.
- 2.8.2.4 If <<customer_name>> requests a UCSL and it is not available, <<customer_name>> may request the Sub-Loop facility be modified pursuant to the ULM process request to remove load coils and/or bridged taps. If load coils and/or bridged taps are removed, the facility will be classified as a UCSL.
- 2.8.2.5 Unbundled Sub-Loop Distribution Intrabuilding Network Cable (USLD-INC) is the distribution facility inside a building or between buildings on the same continuous property that is not separated by a public street or road. USLD-INC includes the facility from the cross-connect device in the building equipment room up to and including the point of demarcation, at the end user's premises.
- 2.8.2.6 BellSouth will install a cross connect panel in the building equipment room for the purpose of accessing USLD-INC pairs from a building equipment room. The cross-connect panel will function as a single point of interconnection (SPOI) for USLD-INC and will be accessible by multiple carriers as space permits. BellSouth will place cross-connect blocks in 25-pair increments for <<customer_name>>'s use on this cross-connect panel. <<customer_name>> will be responsible for connecting its facilities to the 25-pair cross-connect block(s).
- Unbundled Sub-Loop distribution facilities shall support functions associated with provisioning, maintenance and testing of the Unbundled Sub-Loop. For access to Voice Grade USLD and UCSL, <<customer_name>> shall install a cable to the BellSouth cross-box pursuant to the terms and conditions for physical collocation for remote sites set forth in this Agreement. This cable will be connected within the BellSouth cross-box by a BellSouth technician during the set-up process. <<customer_name>>'s cable pairs can then be connected to BellSouth's USL within the BellSouth cross-box by the BellSouth technician.
- 2.8.2.8 Through the Service Inquiry (SI) process, BellSouth will determine whether access to Unbundled Sub-Loops at the location requested by <<customer_name>> is technically feasible and whether sufficient capacity exists in the cross-box. If existing capacity is sufficient to meet <<customer_name>>'s request, then BellSouth will perform the site set-up as described in Section 2.8.2.9. If any work

must be done to modify existing BellSouth facilities or add new facilities (other than adding the cross-connect panel in a building equipment room as noted in Section 2.8.2.9) to accommodate <<customer_name>>'s request for Unbundled Sub-Loops, <<customer_name>> may request BellSouth's Special Construction (SC) process to determine additional costs required to provision the Unbundled Sub-Loops. <<customer_name>> will have the option to proceed under the SC process to modify the BellSouth facilities.

- 2.8.2.9 The site set-up must be completed before <<customer_name>> can order sub-loop pairs. For the site set-up in a BellSouth cross-connect box in the field, BellSouth will perform the necessary work to splice <<customer_name>>'s cable into the cross-connect box. For the site set-up inside a building equipment room, BellSouth will perform the necessary work to install the cross-connect panel and the connecting block(s) that will be used to provide access to the requested USLs.
- Once the site set-up is complete, <<customer_name>> will request sub-loop pairs through submission of a Local Service Request (LSR) form to the Local Carrier Service Center (LCSC). Order Coordination is required with USL pair provisioning when <<customer_name>> requests reuse of an existing facility and is in addition to the USL pair rate. For expedite requests by <<customer_name>> for sub-loop pairs, expedite charges will apply for intervals less than 5 days.
- 2.8.2.11 Unbundled Sub-Loops will be provided in accordance with technical reference TR73600.

2.8.3 Unbundled Network Terminating Wire (UNTW)

- 2.8.3.1 Unbundled Network Terminating Wire (UNTW) is unshielded twisted copper wiring that is used to extend circuits from an intra-building network cable terminal or from a building entrance terminal to an individual customer's point of demarcation. It is the final portion of the Loop which, in multi-subscriber configurations, represents the point at which the network branches out to serve individual subscribers.
- This element will be provided in Multi-Dwelling Units (MDUs) and/or Multi-Tenants Units (MTUs) where BellSouth owns wiring all the way to the end-users premises. BellSouth will not provide this element in those locations where the property owner provides its own wiring to the end-user's premises, where a third party owns the wiring to the end-user's premises or where the property owner will not allow BellSouth to place its facilities to the end user. The demarcation point in multiunit premises shall be established consistent with the rules of the FCC promulgated in Docket 88-57.

2.8.3.3 Requirements

CERTIFICATE OF SERVICE

I hereby certify that on March 6, 2002, a copy of the foregoing document was served on the parties of record as indicated:
